

IOPB CHROMOSOME NUMBER REPORTS LXV

Edited by Áskell Löve

These reports are intended as a place of speedy publication of stray chromosome counts which otherwise might remain unpublished. Though a concise reference to a single voucher specimen and the place where it is kept is significant, the importance of a critical taxonomical identification of the material and an exact counting of the chromosome number cannot be overemphasized. Contributors receive ten copies free of charge, but can order additional copies at cost price when sending their manuscripts. Contributions are to be sent to Áskell Löve, 5780 Chandler Court, San José, California 95123, U.S.A.
